Porsche tuning: Only the best!

Dear readers,
The Daimler service congress confirmed what already had become apparent for quite some time: The mood in this sector is pretty positive; everywhere is an upward tendency. Therefore the Automechanika in Frankfurt comes at just the right time. It goes without saying that we will be present - you can find us as usual in hall 8, stand no. L41. We look forward to your visit on this occasion and are fairly pleased that the electro hydraulic drive system of the ROMESS brake-maintenance devices are Europe-wide patented. This is really important due to the fact that lead products often are imitated by the competition. However, the competitors do reach neither the quality nor the technological level by far. Enjoy yourselves while reading

Yours Werner Rogg

Two noble brands merge: The Porsche-tuning expert "FVD" in Umkirch works with the new S 22 (below).

Mr. Dieter Ohnstedt, managing director of the Porsche-tuning specialist "FVD Brombacher" only uses the best equipment in his workshop. At "FVD" not only highest requirements are made regarding the finishing of the already noble sports car, but also regarding the equipment, i.e. brake-maintenance only from the best - from ROMESS. The technical expert of ROMESS Mr. Kay-Uwe Karsten taught the employees of "FVD Brombacher" how to use the latest S 22, which has been improved due to a lateral stabilization and is highly appreciated by the customer. The S 22 is a container device and therefore the ideal solution for workshops which buy brake fluid from one supplier. The car mechanics of FVD appreciate the container device, since they work with different brake fluids, among other things with special racing brake fluids.

There is always one which fits

No can do - not with us. This slogan also applies to the wide adapter assortment of ROMESS - since we offer a lot of adapters for any vehicle brand and type common on the market, which allow the application of our devices. There are many solutions in our adapter list, even for the so-called "exotics" and vintage cars, but also for commercial vehicles and motorbikes. Our adapted list can be downloaded from our website www.romess.de. A good example for one of our quite common vehicle adapters is the 50324 for the new Ford Fiesta.

Every pot has its lid - and to every vehicle fits an adapter: The type 50324 for the Ford Fiesta.

Severe test: Werner Rogg (left) explains the production process to the auditors during the re-certification.

Recertified

ROMESS has acquired for the repeated time the recertification of the DIN EN ISO 9001:2008 and is now recertified. The quality-management system steadily tends to optimize the processes in a company and to support manufacturers to produce products which meet any customer's expectations. "Quality defects are quite often found in many products on the market", states Werner Rogg. "We want to set ourselves apart from such manufacturers and focus on quality. Since, if you do not consider this fact, the product has a boomerang effect."

Patent, Patent

If you have good products, you should protect them against copyists. The electro hydraulic driving system of the ROMESS brake-maintenance devices is patented Europe-wide under EP 1 884 664 A2. This is also the fact regarding the steering-wheel balance RNW 2009 - patented Europe-wide under EP 1 687 585 B1.

Pretty strong

BMW has achieved record sales during the first half of 2012. The deliveries increased by approx. 8 per cent compared to the preceding year at more than 900,000 vehicles.

Personal details: Moved to tears!

Mrs. Catherine Péroche-Jäckle was really touched. She will keep the time at ROMESS as well as her farewell party in fond memories. She has left the company due to personal reasons. The suppliers ought to get used from now on to two new ladies in the purchase department: Mrs. Ingeborg Eisele-Rogg and Mrs. Christine Effinger assume this scope of duties. The number of employees in the production and dispatch has also been increased: From today on, Mr. Franz Effinger takes care of the dispatch and receipt of goods. Andre Fuchsmann, Wilfried Kleist, Petra Berg and Hans Sauter reinforce the production department. In the end, all devices are manufactured in Germany.

Christine Effinger (left) and Ingeborg Eisele-Rogg have undertaken the purchase. Franz Effinger takes care of the dispatch (below).

An emotional farewell: Catherine Péroche-Jäckle enjoyed working at ROMESS.

Google for the vehicle

Flexible with Bluetooth

Should you try to find anything specific in the internet, you need a search engine. This is almost the same case, if you try to detect a leakage at a vehicle. Whereabouts google sets standards in the web it is the ultrasonic leak-detecting device USM 2015 regarding vehicles. The detection of leakages at air conditionings is a real important field of application. Since the air conditionings are flushed with nitrogen, the USM 2015 is exceedingly effective, due to the fact that the conducting signal is highly amplified. Furthermore this instrument saves time and nerves, if it is about to locate leakages in passenger cabins. An optional transmitter is also available at ROMESS. This transmitter is installed in the inner part of the vehicle and sends a signal to the leak-detecting device which is used outside the vehicle. Thereby even the smallest leakages can be detected in a very fast and safe way. Anyway, experienced users know that the ultrasonic device reacts in a more sensitive way in case of humidity. In case of water in the chassis, the signal is amplified by factor 1,000. Therefore it is recommendable to drive into a car wash beforehand.

For the successful steering-wheel balance RW 2009 an adaption is now available which allows using our RW 2009 even in case of big steering wheels. For this application, special distance bushings have to be installed. The standard mini USB bushing will optionally be available with Bluetooth. This sophisticated solution permits a wireless connection to the axle-measuring computer. The measuring values which are determined by the RW 2009 are visualized on the axle-measuring computer can be documented together with the determined data.

automechanika

"We will see us soon in Frankfurt!"

The Automechanika is the leaders' mecca of the automobile industry. If the branch meets, ROMESS the technological leading specialist in the brake-maintenance sector is of course present. The international leading trade fair of the branch promises new superlatives: Although the last Automechanika two years ago was a record event, i.e. 155,000 visitors came from 181 nations to attend the trade fair.

In the history of trade fairs in Frankfurt there has never been such a high number of visitors coming from so many different nations.

"It is very important for us to exhibit at the Automechanika", states the ROMESS managing director Mr. Werner Rogg. "We welcome a lot of estimated friends and business partners at our stand. On this occasion we will present our latest products as well as optimized solutions to them. These are very precious contacts to us." Since ROMESS is a company which goes global, the export is of course an impor-

tant topic. "We certainly are interested in a cooperation with new business partners", adds the sales manager Mr. Norbert Siebold.

He assumes that the innovative steering-wheel balance RNW 2009 will be in the center of attention. Already on the occasion of the Daimler service congress in Hannover this product enjoyed a very positive feedback, since this sophisticated solution facilitates and expedites work in workshops quite a lot. This is also the case regarding the technological leading brake-maintenance devices (which of course are patent protected) of the premium brand ROMESS. "We really look forward to visitors at our stand and hope that we meet many familiar as well as new faces", states Mr. Werner Rogg. "Just come in and look forward to good conversations and superlative products."
